MONEYMESS

WHITEPAPER

V1.0

CONTENTS

1. INTRODUCTION
PROJECT OVERVIEW

MoneyMess is an innovative social Play2Earn game that combines exciting gameplay, collectible elements, and blockchain technology to create a unique gaming experience. At the heart of the game is the management of characters, which can be purchased as NFTs, giving players true ownership of their in-game assets.

The gameplay revolves around managing characters, each of whom has four key attributes: Attractiveness, Power, Wealth, and Popularity. Players can enhance their characters, adapting them to their playstyle and strategy. These attributes affect the ability to attract resources, engage in warfare, develop the economy, and gain popularity among other players.

The project offers a deeply thought-out social component, allowing players to interact with friends, form alliances, and participate in cooperative missions. With integration into Telegram, the game provides easy access through a native web interface that seamlessly embeds into the familiar messenger. This makes the game accessible and convenient for a wide audience.

Additionally, the in-game economy, based on blockchain, allows players to earn by selling or trading their planets and characters on the NFT marketplace. The transparency and security of all transactions are ensured through the use of smart contracts, providing trust and stability within the game.

Thus, **MoneyMess** offers a unique combination of engaging gameplay and social interactions, creating a space where every player can find something interesting and valuable.

1. INTRODUCTION

PROJECT MISSION

Our mission is to create a unique gaming ecosystem that combines elements of strategic development, collecting, and social interactions. We aim to provide players with an exciting gameplay experience that encourages growth and exploration of new opportunities within the Metaverse 0108. MoneyMess also offers true ownership of in-game assets through the use of NFTs, fostering long-term engagement and value for participants.

Vision and Long-Term Strategy

Our vision is to develop **MoneyMess** as a leading platform in the Play2Earn space, where players can influence the game world, choose their character development strategy, and form teams.
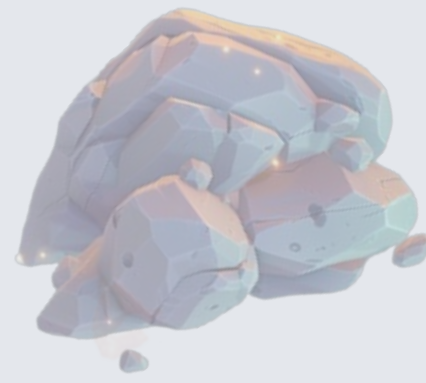

In the long term, we plan to:

- Expand gameplay opportunities and content: Continuously update and add new content, including unique characters, planets, missions, and events, to maintain interest and keep the game dynamic.

- Develop the in-game economy: Strengthen the game's economy using blockchain technologies to ensure the security and transparency of all gameplay processes and transactions.

- Strengthen social connections and interactions: Build a strong community around **MoneyMess**, emphasizing cooperation, competition, and interaction among players. We will develop features that promote social interactions and foster an active and engaged community.

- The project offers a well-thought-out social component, allowing players to interact with friends, form alliances, and participate in cooperative missions. With integration into Telegram, the game provides easy access through a native web interface that seamlessly integrates into the familiar messenger. This makes the game accessible and convenient for a broad audience.

- Global expansion and partnerships: Develop strategic partnerships with other blockchain platforms and gaming projects to enhance the game's capabilities and attract more players from around the world.

- Sustainable development and innovation: We aim for continuous improvement and adaptation to new technologies and trends in the gaming industry to ensure that **MoneyMess** remains relevant, long-term, and a competitive project.

MoneyMess strives to become not just a game, but an entire digital ecosystem where every player can discover unique opportunities and interactions, unlocking potential and enjoying gameplay in a new format.

2. GAME CONCEPT
CORE GAME MECHANICS

MoneyMess is a social strategy game where players manage characters, each represented as unique NFTs. At the core of the gameplay is character development and their attributes, which determine success in various aspects of the game, such as economic growth, interaction with other players, and participation in events.

Each character possesses four main attributes: Attractiveness, Power, Wealth, and Popularity. These attributes can be improved, allowing players to tailor their assets to their chosen strategy. The total number of attribute points is fixed at 25, creating unique combinations and balance between different aspects of the gameplay.

ROLE OF NFTS

In **MoneyMess**, all in-game assets, including planets and characters, are represented in the form of NFTs, granting players ownership rights and the ability to trade assets on the marketplace. NFTs allow each player to own unique digital assets that can be collected, developed, and utilized in gameplay. This also opens up opportunities for creating rare and valuable items that can play a crucial role in players' strategies.

SOCIAL INTERACTIONS

Social elements play a crucial role in **MoneyMess**. The game is integrated with Telegram, providing convenient access through a native interface that allows players to easily interact with friends, form alliances, and participate in collaborative missions. Interaction with other players—whether through trading, cooperation, or competition—becomes a key component of the gameplay, enhancing engagement and fostering a dynamic community.

Players can unite to achieve common goals, as well as compete against each other for the title of the best in various categories, such as wealth, influence, or the popularity of their characters. Social interactions make the game vibrant and engaging, adding depth and variability to the gameplay.

Conclusion:

MoneyMess is more than just a game. It is a comprehensive ecosystem where strategic thinking, interaction with other players, and management of unique assets create an exciting gameplay experience. Players can develop their characters, find and utilize rare NFTs, engage with the community, and discover new opportunities offered by the world of **MoneyMess**.
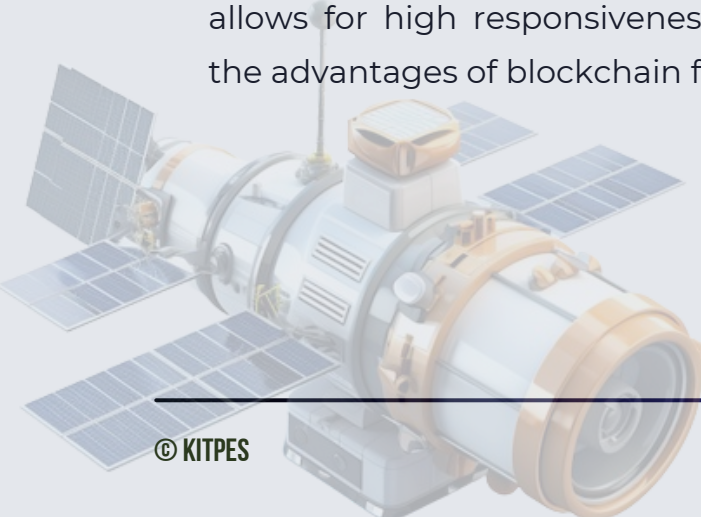

3. TECHNICAL INFRASTRUCTURE
BLOCKCHAIN AND SMART CONTRACTS

MoneyMess is built on blockchain technologies that ensure the security, transparency, and decentralization of the gameplay. At the core of the game are smart contracts that automate and guarantee the execution of all key processes, such as the creation and trading of NFTs, in-game transactions, and asset ownership management. The use of blockchain allows players to be confident in the security of their assets and data, eliminating the possibility of fraud and ensuring independence from centralized systems.

ON-CHAIN AND OFF-CHAIN MECHANICS

The game **MoneyMess** employs a hybrid approach, combining on-chain and off-chain mechanics to ensure an optimal gameplay experience.
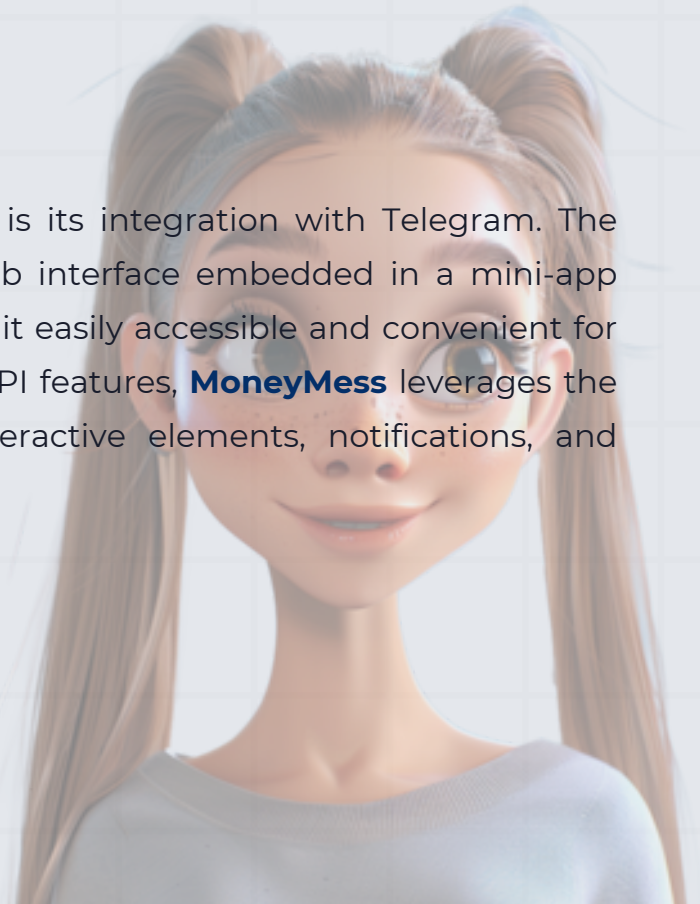

- **On-chain:** Key elements such as the creation and management of NFTs, in-game transactions, and marketplace operations are fully implemented on the blockchain. This ensures immutability, security, and transparency of data, which is especially important for building players' trust in the project.

- **Off-chain:** To enhance performance and reduce transaction costs, some elements of the game, such as the calculation of game attributes, animations, and rendering, are processed on external servers. This approach allows for high responsiveness and user-friendliness while maintaining all the advantages of blockchain for critical aspects of the game.
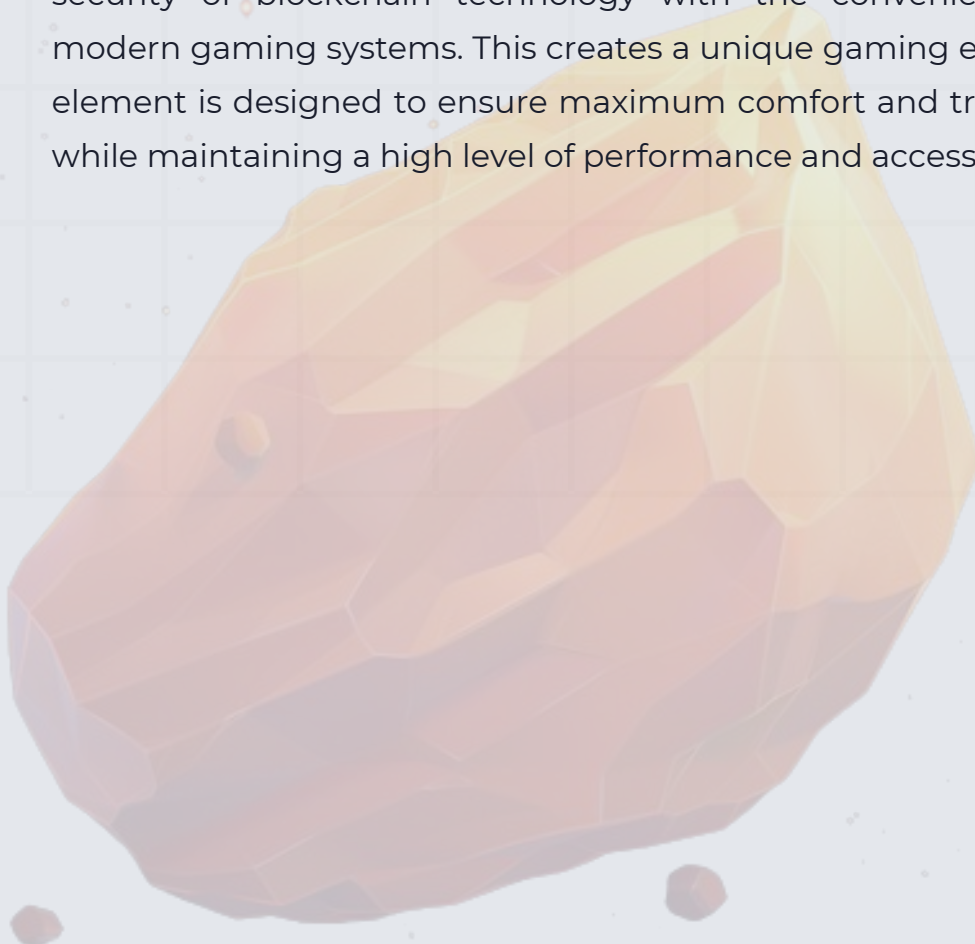

INTEGRATION WITH TELEGRAM

One of the key features of **MoneyMess** is its integration with Telegram. The game is accessible through a native web interface embedded in a mini-app within the Telegram messenger, making it easily accessible and convenient for a wide audience. By utilizing Telegram API features, **MoneyMess** leverages the capabilities of chatbots, supporting interactive elements, notifications, and automated actions within the game.

CONCLUSION

The technological infrastructure of **MoneyMess** combines the reliability and security of blockchain technology with the convenience and flexibility of modern gaming systems. This creates a unique gaming experience where every element is designed to ensure maximum comfort and transparency for players while maintaining a high level of performance and accessibility of the game.

4. GAME ECONOMY
GAME TOKENS AND NFTS

The economy of **MoneyMess** is built around the use of unique tokens and NFTs, which provide the foundation for all in-game operations. Game tokens serve as the primary currency used for purchasing, selling, and upgrading assets such as planets, characters, and other in-game resources. These tokens can be earned by participating in various gaming activities, completing missions, and interacting with other players.

NFTs represent unique digital assets that are key elements of the game. Each planet, character, or item is an NFT, making them distinct and providing authentic ownership of these assets. Players can collect, upgrade, and trade their NFTs on the internal marketplace, as well as use them to achieve success in the game. All transactions involving NFTs are recorded on the blockchain, ensuring their security and immutability.

MARKETPLACE AND TRADING

In **MoneyMess**, there will be an in-game marketplace where players can buy, sell, and trade their NFTs. This marketplace allows players to discover rare and unique assets, as well as monetize their gaming achievements. Transactions on the marketplace are conducted using in-game tokens, which stimulate economic activity and enable players to build up their resources and assets.

The marketplace will also play a crucial role in the game's development, as it allows players to adapt their strategies by acquiring the necessary resources to enhance their heroes. Engaging and actively participating in the marketplace opens up opportunities for players to create competitive advantages and achieve high results in the game.

MONETIZATION

Although **MoneyMess** focuses on gameplay and social interactions, the in-game economy also provides opportunities for monetization. Players can sell their NFTs on the marketplace, participate in events and tournaments with rewards, and use their game tokens to upgrade and develop their assets.

Monetization in **MoneyMess** g them to develop their planets and characters. With a well-thought-out economy and integration with blockchain technologies, players can be confident in the fairness and transparency of all economic processes within the game.

CONCLUSION

The game economy of **MoneyMess** is a complex and dynamic system that provides players with ample opportunities for development, trading, and interaction. Based on the use of game tokens and NFTs, the game's economy allows players to actively participate in the life of the game world, achieve success, and enjoy an engaging gameplay experience that is underpinned by the real value of digital assets.

5. GAME DEVELOPMENT AND CONTENT
REGULAR UPDATES AND EXPANSIONS

One of the key strategies of **MoneyMess** is the continuous development of the game through regular updates and the release of new content. We strive to create a dynamic gaming environment that will constantly evolve, offering players new opportunities and challenges.

Content updates will include:

- **New characters:** Regularly adding new unique NFTs with diverse characteristics that expand strategic possibilities and increase gameplay variability.

- **Missions and events:** Continuously introducing new missions and in-game events that provide players with fresh scenarios for interaction and achievements, encouraging them to explore and participate in the life of the game world.

- **Special cards and items:** Releasing limited collectible cards and items that will be available for a limited time and can significantly impact the game's strategy.

SOCIAL FEATURES AND INTERACTION

MoneyMess actively develops social features to ensure maximum player engagement in the game. We understand the importance of interaction and communication for creating a cohesive gaming community.

Plans for developing social features include:

- **Referral system:** Introduction of referral programs that will encourage players to invite friends to the game, expanding the community and strengthening social connections.

- **Achievements and rankings system:** Development of an achievements and rankings system that will allow players to compete for the title of the best and showcase their accomplishments within the community.

- **Support for alliances:** The ability to create guilds and alliances, allowing players to join forces for cooperative missions, participate in events, and protect their interests in the game world.

CONCLUSION

Development and content in **MoneyMess** play a key role in maintaining player interest and activity. Continuous content updates, the development of social features, and cross-platform support allow **MoneyMess** to remain a relevant and sought-after game that continues to attract and inspire players around the world. We are committed to creating a long-term and captivating gaming universe 0108.

6. MARKETING AND COMMUNITY PROMOTION STRATEGY

To successfully develop **MoneyMess** and attract a wide audience, we have devised a comprehensive marketing strategy aimed at building brand awareness, attracting new players, and maintaining the interest of existing users.

The key elements of the marketing strategy include:

- **Digital marketing and advertising:** We actively utilize digital marketing channels such as social media and affiliate programs to reach the target audience and attract new players. Special attention is paid to promotion within crypto communities and gaming platforms.

- **Referral programs:** Introducing a referral system encourages current players to invite their friends and acquaintances, creating organic community growth and enhancing user engagement. Each player will be able to earn bonuses and rewards for bringing new participants into MoneyMess, forming alliances and increasing their advantage.

- **PR campaigns and partnerships:** We plan to collaborate with well-known bloggers, crypto influencers, and gaming media to cover news and events related to MoneyMess. This will help enhance project visibility and attract the attention of key players in the market.

- **Special events and contests:** Regularly hosting special events, tournaments, and contests with rewards will encourage player participation and maintain a high level of activity within the community.

COMMUNITY DEVELOPMENT

Community is at the heart of **MoneyMess**. We aim to create a friendly and active environment where every player feels part of a large and meaningful project.

Plans for community development include:

- **Active community management:** We will actively engage with players through social media and messaging apps, maintaining openness and accessibility of the development team. Regular updates, feedback, and responses to participants' questions will help build trust and maintain a high level of loyalty.

- **Player support and educational initiatives:** We plan to hold AMA sessions (Ask Me Anything) with the developers, where users can ask their questions and receive real-time answers.

- **Creating programs for community leaders:** We will introduce incentive programs for active community members, such as moderators, content creators, and opinion leaders, who will promote the development and maintenance of a positive atmosphere in the game.

CONCLUSION

Marketing and community are key elements of **MoneyMess's** success. We aim not only to attract new players but also to create a strong and cohesive community that actively participates in the game's life and helps in its development. With a comprehensive marketing strategy and attention to the needs of the community, **MoneyMess** has every chance of becoming a leading platform in the Play2Earn gaming sector.

7. LEGAL ASPECTS
RIGHTS TO NFTS AND INTELLECTUAL PROPERTY

In **MoneyMess**, all in-game assets, including planets, characters, and items, are represented as NFTs (Non-Fungible Tokens), ensuring their uniqueness and genuine ownership by players.

NFT Rights:

- **Ownership and Use:** Purchasing an NFT in MoneyMess grants the player the right to own a unique digital asset. This right includes the ability to trade, sell, and use the NFT within the game and on external platforms that support this standard. NFT owners have full rights to utilize their assets within the game.

- **Content Licensing:** Upon acquiring an NFT in **MoneyMess**, players receive a limited license to use the content associated with this NFT solely for personal purposes within the game. All intellectual property rights, including copyrights for the design and graphics of the NFT, remain with the game developers. The license does not include rights for commercial use or distribution of the content outside of the gameplay, except as provided in our terms of use.

- **Trading and Transfer of Rights:** Players can freely trade and transfer their NFTs to other participants in the game through the internal marketplace or external platforms supporting the NFT standard, with all transactions recorded on the blockchain.

COMPLIANCE WITH LEGISLATION

MoneyMess strictly adheres to the legal norms and standards applicable in various jurisdictions where the game is available. We take into account the following aspects:

- **Regulation of cryptocurrencies and NFTs:** In accordance with the legislation on cryptocurrencies and digital assets in different countries, we ensure compliance with transparency, security, and consumer protection requirements. Our smart contracts and transactions adhere to international standards as well as the requirements of regulators in the field of financial technologies.

- **Data protection and privacy:** **MoneyMess** complies with data protection laws, such as the General Data Protection Regulation (GDPR) in Europe and the California Consumer Privacy Act (CCPA) in the United States. We ensure robust protection of users' personal information and adhere to all privacy and data security requirements.

- **International and local requirements:** We conduct regular legal audits and compliance checks in each country where MoneyMess is available. This includes adhering to local tax requirements, online trading regulations, and gaming content regulations.

- **Fraud prevention policy:** **MoneyMess** implements measures to prevent fraud and unauthorized use of the platform. We actively monitor and analyze activity on the platform to detect and stop any attempts at abuse.

CONCLUSION

The legal aspects of **MoneyMess** are an important part of our project, ensuring the safety and protection of players' rights. We strive to comply with all applicable legal norms and standards to guarantee fairness, transparency, and compliance in our gaming world.

8. CONCLUSION
BRIEF SUMMARY

MoneyMess is an innovative Play2Earn social game that combines elements of collecting, developing, and interacting with friends. Built on advanced blockchain technologies and integrated with the Telegram platform, MoneyMess offers a unique gaming experience where each player can own, upgrade, and trade their digital assets represented as NFTs.

The game features 38 unique characters, each possessing four key attributes: attractiveness, power, wealth, and popularity. The game's economic model is carefully balanced and provides opportunities for active market participation, trading, and strategic planning.

MoneyMess is actively evolving, offering regular content updates, expanding gameplay possibilities, and strengthening the community. We are creating a safe and transparent gaming environment where every participant can enjoy the game, interact with other players, and become part of a growing ecosystem.

Join **MoneyMess** and discover a world where every move matters, and your decisions shape the future of your planet and the entire community. We invite you to become part of our project and together with us develop and explore the vast expanses of the **MoneyMess** universe!
